

DocAve Version 4.0.18.2

Release Date: March 21, 2007

Bug Fixes

Server

- MS SQL option - Auditor Database issue

Client

- DocAve4.0.16.1 SubSite backup - Diagnostic patch, a subsite cannot be backed up due to smigrate failure
- DocAve4.0.16.1, Item level webpart restore wrong list id
- Item level backup, cannot backup all list whose author was deleted,
- Item restore, aspx restored with wrong path
- Backup doesn't backup site due to issue with browsing SharePoint structure.
- DocAve3.1 data migration to DocAve4.0 successful but restoring the data to SharePoint fails
- Site level backup failing due to insufficient storage space for backup, no e-mail notification sent and staging temp directory on Client is not cleaned up.
- Area Permissions not restored properly by DocAve 4.0 Item Level backup and restore.
- Upgrade from 4.0.15.5 to 4.0.16.0 via patch caused IIS to restart and stops SMTP service.
- Site Level backup job fails when a user uploads files to SharePoint during the DocAve site level backup process.
- Item Level failed to restore Area with customized template from Agent 1 to Agent 2, and no error message from Detail Report.
- Job Control does not work for all levels backup.
- Archiver stub error: When user opens a stub, stub restore dialog appears, when "Restore" or "Display" is selected, a cannot parse host name exception will be displayed.
- Info Path from displaying hang: InfoPath forms (XML files) stored in a Forms Library, when new forms are uploaded, upload succeeds. When "Save As" options is chosen and XML file format selected, upload succeeds. When the file is double clicked to open the form, no response.
- When saving a word document to a document library, the save dialog hangs. If cancel is selected, the word document displays as saved.
- Hyperlink to Infopath form is not being restored
