- Bug#2001: Failed to out of place restore a list
- Bug#2062: Install bug when use SQL Server
- Bug#2081: Item Incremental backup failed

Known Issues

- Upgrading by client patch will not enable the New Features such as Live migrator, SPDR PR, etc. Customer need to go to **Agent Configuration Tool** to check the new feature agent types and click "Confirm" to enable the new features. For Live Migrator from SP 2003 Agent, there's no check box for Live Migrator, but customer will need to click "Confirm" to enable it for SP2003 agent.
- Customers upgrading to DocAve 4.1.4.0 package from lower version of DocAve 4.1 will see following error message while trying to download the 4.1.4.0 packages.

An error when get ProgressJDBC exception on Hibernate data access; nested exception is org.hibernate.exception.GenericJDBCException: could not execute query.

The packages are downloading properly however progress bar at the bottom of the GUI can't be updated. Please click on "OK" for the error message and wait few minutes until the packages load to Patch Manager screen and continue with the patch update.
