

For organisations looking to accelerate SharePoint 2010 deployment, AvePoint's DocAve Software Platform helps to:

- Minimise the business impact of migration
- Protect investments and mission-critical information
- Meet organisational time tables with flexible scheduling

Migrating to Microsoft® SharePoint 2010 Solution Brief

Learn how organisations worldwide are using AvePoint's DocAve Software Platform to accelerate Microsoft SharePoint 2010 deployment.

Business Needs

Consolidating enterprise-wide assets into a single Microsoft SharePoint repository drives efficiency and accelerates collaboration among knowledge workers. Transferring mission-critical content from legacy repositories, however, can be a challenge due to:

- A lack of out-of-the-box migration capabilities
- An abundance of legacy data with no easy way to determine what content is relevant
- The large amount of resources necessary to properly assess, execute, and validate a migration project
- Business disruptions caused over the course of the migration project.

Challenges

When developing a migration strategy, questions arise about how to maintain business continuity throughout the process, how to streamline the organisation of assets in the new platform, and how to provide a reliable transition experience for knowledge workers. A truly successful migration initiative addresses several key concerns:

- Multiple legacy sources must be consolidated efficiently
- All data must be migrated – including all metadata
- Re-organising legacy elements and content must be easy and precise
- Migrations must be performed according to business schedules with minimum disruption

DocAve Difference

AvePoint offers a truly comprehensive solution to help organisations accelerate SharePoint's deployment as a central repository for all enterprise content. DocAve migration solutions help organisations automate the consolidation of data from more than 14 legacy repositories while maintaining all critical metadata and minimising business disruption. Organisations can further reduce business disruption and time-to-value by leveraging AvePoint Partner Services (APPS) to perform detailed data analysis, content and application migrations, and post-migration verifications.

Key Benefits of the DocAve Software Platform

With DocAve, organisations are provided with robust capabilities to tailor migration projects to meet unique business needs. Administrators can choose to configure highly customisable mapping options to preserve metadata or permissions, granularly select content for migration to align migration projects with organisational timetables, migrate content in real-time without locking content databases for on-the-fly data transfers, or support platform co-existence during the course of the migration project by leveraging full and incremental migration options with customisable scheduling. DocAve helps to:

- **Minimise the Business Impact of Migration**
DocAve Migrator transfers content from legacy repositories to Microsoft SharePoint in an organised and efficient manner. This improves information technology (IT) productivity and reduces the time-to-value for deploying SharePoint as a standard collaboration platform.
- **Protect Investments and Mission-Critical Information**
Business-critical information residing in legacy content sources is kept intact. Folder structures, attachments, document proper ties, and all associated metadata are

retained with full fidelity. End-users can confidently continue to access their content without interruption.

- **Flexible Scheduling for Migration**
Migrate an entire instance or just an individual content item. Reorganise information architecture upon migration to clean up existing clutter. Granular or bulk content migration and flexible job scheduling empowers administrators to plan migration jobs according to business needs, reducing negative impact on production environments.

Deploying SharePoint 2010 with DocAve

Migrate to SharePoint 2010 with DocAve Migrator from:

- SharePoint 2001, 2003, 2007
- Exchange Public Folder
- File Systems/Network Shares
- Documentum/eRoom
- Open Text Livelink/Vignette
- Lotus Notes/QuickPlace
- Oracle Stellent
- Static, HTTP/S accessible web content and internet sites
- Microsoft Content Management Server 2002 (MCMS 2002)

AvePoint Partner Services (APPS):

APPS uses AvePoint's SharePoint expertise to help partners and customers migrate content, functions, and processes from legacy systems through:

- Collaborative analysis of legacy systems' functions and features
- Full-fidelity migration of legacy business applications and content to SharePoint
- Expedient SharePoint migration with minimal business disruption
- Custom SharePoint solutions that unleash the platform's full business potential

Migrate content within or across SharePoint 2010 farms to Microsoft Office 365 with DocAve Content Manager.

About AvePoint

AvePoint is a global technology company and proven software leader. Since its founding in 2001, AvePoint has become one of the world's largest providers of enterprise-class governance solutions for Microsoft SharePoint.
