

# Collaboration to Go

For modern workers, information has to be ready to go and available at will. As availability becomes the new standard for information in our personal lives, businesses feel the pressure to provide the same experience at work. Mobilizing your collaboration platform, however, is not as simple as flicking a switch.

## 6 Essentials of Mobilization

<b>Integration</b> The solutions you choose should work seamlessly with your existing content management systems. 	<b>Usability</b> The tools you provide should feel like an extension of technology your employees already know how to use and designed to be fully accessible. 	<b>Productivity</b> Allowing work outside the office shouldn't mean losing insight into performance. 
<b>Scalability</b> More users and more content shouldn't mean a greater maintenance burden. 	<b>Security</b> Remote access shouldn't mean letting go of control over your data. 	<b>Privacy</b> Sensitive data should still abide by boundaries dictated by corporate and industry policies. 

AvePoint's solutions for mobility puts you in control of your digital assets. By empowering your employees with remote access to the content they need, they are less likely to look for outside means of accomplishing their tasks that could lead to IT governance and compliance issues. With integrated solutions that can help you enforce security measures and corporate policies, track progress and usage, and maintain data sovereignty, give your employees the ability to collaborate from anywhere on any device with confidence.
